## CONVEYOR BELT CLAMPS

## 7 TONNE RATING

INCLUDING  
RATCHETS

Conveyor Products Pty Ltd manufactures the Sure Grip belt clamps in Australia and distributes this product directly to the market throughout Australia, New Zealand and South-East Asia.

Sure Grip® Belt Clamps apply positive pressure directly to the surface of the belt. This means less damage to the carcass of the conveyor belt and generates significantly more pulling force.

The Sure Grip® Belt Clamp is robust and the bolt is not removed from the clamp, thus minimising damage and/or loss.

### FEATURES

- ▶ The Original patented design since 1998
- ▶ Australian Made
- ▶ Clamp end & Screws are made from High Grade Steel
- ▶ Designed for use in any conditions
- ▶ Choice of Lightweight aluminium bars or heavy duty steel bars
- ▶ Easy to transport & assemble
- ▶ Available in different colours
- ▶ Available in single lug or double lug head
- ▶ Available with ratchet winches to remove trough on heavier belts.

# SURE GRIP®

## 7 TONNE RATING INCLUDING RATCHETS

The Sure Grip Ratchet series offers the inclusion of ratchet winches on both ends of the clamp bars to assist in removing the belt trough in heavier belts.

The use of ratchet winches allows the raising of the lower bar with ease and eliminates the need for back-breaking lifting, thus reducing the possibility of injury or accidents.

The Sure Grip Ratchet series includes the following two ratchet winch options:

### R1 Ratchets

SG7-R1

### Anti-Belt-Slip (ABS) Controlled Release Ratchets

SG7-ABS

## R1 Ratchets

### SURE GRIP 7 TONNE BELT CLAMPS c/w R1 RATCHETS

Max Belt Thickness = 50mm

## Anti-Belt-Slip (ABS) Controlled Release Ratchets

When the tension is released using a conventional ratchet the user has very little control of the load release. Anyone who has experienced this knows how important ABS is. It means you have complete control even during release.

The ABS system lets you release the pretension force in small steps. This gives you the opportunity to lower the bottom bar in a safer manner helping prevent damage and accidents.

Also the extended handle of the ABS ratchet makes tensioning much easier. You can achieve even high pretensioning forces using much less muscle power. As you always pull ABS ratchets downwards instead of pushing upwards, they are much gentler on your back. With the extra-long lever, you'll be able to fulfil ergonomic demands to an even higher level.
